

Teaching PLAY

Teaching PLAY is an educator-training program that focuses on the core principles of PLAY Project's evidence-based, developmentally-appropriate, relationship-oriented, child-center approach. Students with Autism Spectrum Disorders (ASD) are often hard to engage in the classroom setting, which can make learning difficult for them. Teaching PLAY introduces teachers and school staff to an innovative approach for helping students with ASD increase engagement and connection, leading to a love of learning for all students.

TEACHING PLAY WORKSHOPS

Our PLAY Consultants offer full-day Teaching PLAY workshops to teaching teams and school-based staff. Our workshops are both engaging and interactive. The workshops provide several videos to demonstrate the impact of Teaching PLAY and specific examples of how Teaching PLAY can be used throughout all activities within the classroom setting. Attendees will leave this training with strategies to implement right away. **Workshops are also OCCRRRA approved for 6 credit hours!**

“

The Teaching PLAY training is so very engaging and informative. The training presents a new lens for staff to view students with Autism. The use of videos, real-life examples and user-friendly resources reinforces the concepts and allows participants to gain a true understanding of how to apply this approach in the classroom. Myself and our entire staff came away with new strategies we could implement immediately to connect and build relationships with those students who are most difficult to reach and engage.

”

-Kim Pachis, Early Childhood Director
